

AMEREN MISSOURI RETRO-COMMISSIONING

COMPRESSED AIR

The Ameren Missouri BizSavers® Retro-Commissioning program provides compressed air incentives for low cost/no cost improvements to optimize large compressed air systems. As compressed air systems change form and degrade over time, retro-commissioning is needed to optimize and bring the system back to an optimal efficiency level. Compressed air can be the most inefficient and most expensive source of energy usage in manufacturing plants. The purpose of the Ameren Missouri BizSavers Retro-Commissioning program is to incentivize energy efficiency measures that have a simple payback of 18 months or less.

Benefits of Compressed Air Retro-Commissioning include:

- Increased operating margins
- Improved manufacturing output
- Energy savings
- Reduction in carbon emissions
- Better quality control
- Decreased maintenance
- Less manufacturing downtime

Retro-Commissioning projects submitted through the program have ranged from **5% - 15% in energy savings** of the facility's annual energy usage.
